

GeneRecords 1.0

GeneRecords is a solution for GenBank biological flat file parsing, as it implements a structured representation of each feature and feature qualifier in GenBank following import in a common database managing system usable in a personal computer (Macintosh and Windows environments). This collection of related databases enables the local management of GenBank records, allowing indexing, retrieval and analysis of both information and sequences on a personal computer.

Minimal requirements for use are:

Macintosh OS 8.1 or later, 9.x

Macintosh OS X with Classic

Windows OS 95/98 with Internet Explorer 4.0 or later,

NT 4.0 with Service Pack 3, 2000.

DOWNLOAD

GeneRecords (version 1.0) can be downloaded from the following address:

http://apollo11.isto.unibo.it/software/GeneRecords_1.0/

The user can choose among three different versions, related to three possible operating systems:

Mac OS 9 (download file [GeneRecordsMacOS9.sit](#))

Mac OS X (download file [GeneRecordsMacOSX.sit](#))

Windows (download file [GeneRecordsWin.zip](#))

The downloaded file should be automatically decompressed, generating a "GeneRecords" folder.

If it does not happen, the decompression need "Stuffit Expander" utility for the Mac versions, or "WinZip" utility for the Win version.

INSTALLATION

Follow specific instructions for each version online (HTML format):

Mac OS:

http://apollo11.isto.unibo.it/software/GeneRecords_1.0/MacOS_Tutorial/

Windows:

http://apollo11.isto.unibo.it/software/GeneRecords_1.0/Win_Tutorial/

USER GUIDE

A user Guide is available for each version online (HTML format):

Mac OS:

http://apollo11.isto.unibo.it/software/GeneRecords_1.0/MacOS_Guide/

Windows:

http://apollo11.isto.unibo.it/software/GeneRecords_1.0/Win_Guide/

Please report any bug or problem to:

The free included FileMaker Pro (FMP) runtime allows free records management and browsing, while the creation of new fields for elaboration or further relationships definition require the installation of the FMP application. We encourage any creative use, modification and noncommercial redistribution of GeneRecords, as long as the original paper is cited, and statement that the original program has been modified is provided (if the case).
